

GW-S Automatic Sprinkler Special Colour Paint

GW SPRINKLER A/S

Approvals.

Most GW-S range sprinkler heads are FM-, VDS- and CE-approved and are available in many colours and finishes.

Cost.

Special coloured sprinklers are charged at the price of White painted heads and, in addition, each batch of sprinkler heads painted to a special colour is subject to a one-off paint surcharge. Where the colour has already been used for another customer and **is in stock** the surcharge will be lower, but if a **special mix** of paint is required, the surcharge will reflect the extra cost of the paint. Where the quantity of heads being painted is large, a discounted price may be negotiated with GW in advance.

Accessories.

Where heads need to be installed with single, or two-piece rosettes these can be painted at the same time as the sprinkler heads. While the rosettes will be charged as White, no additional special colour surcharge will be made if the heads and rosettes are painted at the same time. Similarly, sprinkler guards and other items can be colour matched to the sprinklers if necessary.

Non-standard colours.

All colours specified in the RAL system of colour coding can be accommodated. However, if the colour is not in the RAL system, or the RAL number is not known, colours can often still be matched if a sample is provided. Depending on the colour there may be an additional surcharge.

Percentage gloss.

When defining paint-colours it is best to specify the percentage gloss finish. If no gloss ratio is specified 33% ($\pm 2\%$) gloss will generally be used as standard.
